# Exercise 2.3

1 a) A pie chart would not be a good choice to represent the influenza deaths of 50 states.

2 a) A bar chart, may work, but isn't the best choice if I want to keep the labels (numbers). Since there is so much info. This looks very busy. I did however follow a gradient color scheme.

This is also an alternative view.

3 a) A tree map would be the best choice as it will cover data for all 50-states that have the highest mortality.
